Evenings—Children 10c and 20c, incl. tax.
Adults Main Floor, 27c and 3c tax, . . . 30c
Adults, Balcony, 18c and 2c tax, . . . 20c

HEAR MRS. GARNER PLAY A SPECIAL SELECTED PROGRAM ON THE KIMBALL ORGAN.

STANDARD NEWS WRITER CALLED TO BEDSIDE OF BROTHER IN SALT LAKE WHO HAS SUFFERED SERIOUS INJURY

Albert E. Warden, news writer on The Standard's staff, hurried to Salt Lake today upon being informed that his brother, James Warden, was in a precarious condition as a result of an automobile accident in Salt Lake yesterday, when one woman was killed and several persons were injured.

The accident occurred at 1:30 o'clock yesterday at Fifth South and State streets. Warden was the driver of one of the cars in the crash, but it was thought he had escaped injuries except of a trivial nature.

Late last night, however, he became seriously ill. He is thought to have suffered injury to his spine.

Lieutenant W. J. Walker, driver of the car which crashed into the Warden automobile, is being held under bonds of \$5,000 pending investigation of the accident. Warden was not held.

The Warden automobile was carrying Mrs. Melvina Clark, the woman who was killed, and several others to the cemetery, where Mrs. Clark's daughter was to be buried. The funeral services were stopped when a reporter reached the cemetery with the news of the accident.

Here are the results of the crash:

DEAD
MRS. MELVINA CLARK, 63 years of age, widow of Hyrum B. Clark, 2043

INJURED
Miss Sabina Clark, 30 years of age, daughter of Mrs. Melvina Clark; frontal fracture of the skull, injured hip and bruised about body.

Mrs. Louise Lawson, 43 years of age, 123 N. street, widow of Howard H. Lawson; dislocation of spine, partial paralysis of body.

Mrs. Stella Fisher Clark, 20 years of age, wife of Lynn Clark, East Crescent; fracture at base of skull, shoulder mangled and body injured.

Mrs. Viola Clark Wither, 24 years of age, daughter of Mrs. Melvina Clark, 2079 South Fifth East street, wife of Raymond S. Wither, painfully bruised and scratched about the face and body.

J. Richard Clark, ten-month-old son of Mr. and Mrs. Lynn Clark, cut and bruised about head.

Sherry Wither, five-year-old daughter of Mrs. Viola Wither; bruised about body.

Lieutenant (junior grade) William J. Walker, U. S. N., 24 years of age; badly bruised about the shoulders.

James Warden, 32, local agent for Nash Motor company, seriously injured.

Howard Lawson, 20, son of Mrs. Lawson, 123 N. street; shock.

every four minutes. The fresh air is drawn from the outside and passing through the large fans, enters the theatre auditorium at a temperature of about seventy degrees. Any temperature desired can be given to the fresh air sent through the theatre.

CARD OF THANKS

We desire to express our thanks to those who were so kind to us during the illness of our husband and father, and at the time of his death; those who sent such beautiful flowers, and those who, with tender words and music, helped to lift the burden of our sorrows.

MRS. M. MALONE AND FAMILY

Austria is now appealing to the allies and to America in particular, to save her from herself. How long ago was it, now, that she insisted on saving Serbia from herself—or for herself?

Our idea of the most useless thing in the world is the government report that there will be a bumper crop next year.

DANCING CAP OF JET WITH PARADISE FAN

When a dancing cap such as this example of the latest mode is worn, a very large, very soft of paradise fan is just the right touch to complete the picture. The fan in the illustration today is of black and orange and orange feathers. Black jet makes the new cap, which is swathed with soft folds of tulle, with the exception of a short, visor-like projection of jet in front.

FARMERS NOT TO JOIN FEDERATION OF LABOR

Organizations Decide Interests of Farmers and Unions Not Identical, but Opposed

WASHINGTON, Feb. 9.—Farmers' organizations will not join the American Federation of Labor in its non-partisan campaign to elect this year only friends of the trades' union movement, according to T. C. Atkeson, representative of the National Grange, which has 700,000 members.

Mr. Atkeson pointed out that representatives of the Grange, National Farmers' union, International Farm congress, American Farm Bureau federation, Farmers' National congress and National Milk Producers' federation, recently met here and formulated a platform of principles but decided that individual members should be allowed to exercise their right of personal preference in voting.

The program has been sent to every member of congress, Mr. Atkeson said, and it may be expected that farmers will observe the attitude of legislators on bills affecting their interests.

"We decided," Mr. Atkeson said, "that the interests of the farmers and of organized labor were not identical, in fact were diametrically opposed on some questions. The union man wants shorter hours and higher pay which means higher prices to the consumer. A similar attitude on the part of the farmers would mean curtailment of production of food until the people were so hungry they would pay exorbitant prices rather than starve. Instead it is our policy to encourage as much work as possible to stimulate production, so that normal conditions may be restored."

Mr. Atkeson said the opposing interests of farmers and unionists had illustration at the time congress fixed a price for wheat, the unions urging a low price.

McLean Explains Loss of Ice Championship

CHRISTIANIA, Feb. 9.—Robert McLean, of Chicago, who lost the world's ice skating championship yesterday to Oscar Mathiesen, of Christiania, stated today that his mistake in taking the wrong course in the 10,000 metre race was caused by an official giving incorrect signal at the curve. McLean and his manager say that moving pictures of the events will prove where the fault lies.

Supporters of McLean claim that his sprint after his momentary stoppage at the outset of the long race when he realized he was on the wrong course, exhausted him. McLean plans to go to Stockholm where he will try to lower some of the world's records.

ORSON P. WILLIAMS OPENS NEW AUTO TOP SHOP

Orson P. Williams, formerly with the Read Auto Top Shop, has opened the William Auto Top Company, corner Hudson and Twenty-third. The shop is first class in every respect. Workmanship and quality are the best. Mr. Williams asks that you call and get his prices. Satisfaction guaranteed.

Juan Marshall Is Assigned to El Paso

EL PASO, Tex., Feb. 9.—Juan Marshall, vice consul for Mexico at San Antonio, Texas, has been appointed consul of the third class and assigned to El Paso, according to an announcement made today by Alberto Ruiz Sandoval, acting consul general for Mexico at El Paso. No advice regarding the appointment of a consul general here have been received so far, according to Sandoval.

NORMAN ROSS WINS

MELBOURNE, Feb. 9.—Norman Ross, the American swimmer, today defeated F. E. Beaupre in a close race for the 220 yard swimming championship of Victoria. The time was 2:28.15, which is a new Australian record for the distance.

HITCHCOCK ON TICKET

OMAHA, Neb., Feb. 9.—Friends of Senator G. M. Hitchcock today began circulation in Nebraska of petitions to have his name placed on the Democratic presidential preference ballot at the coming primaries.

Spanish Influenza

Considerable comment has been made lately upon the prevailing epidemic of influenza. Also as to the most effective measures to adopt in combating this disease. In reference to this subject the following article, given by A. F. Blair, D. C., Ph. C., at a public session of the convention recently held in Salt Lake City, I believe offers some practical suggestions on this question, which is deserving of the careful consideration of our community.

H. J. McKAY, D. C., Ph. C.

"Direct and Indirect Observations of Over Thirty-five Thousand Cases. Much comment has been made in many of the leading magazines and newspapers on this subject of 'Influenza,' and particularly in reference to the results of the prophylactic treatment, and other methods adopted in combating this disease.

"What I shall say is not intended to reflect on the best judgment of the individual or our city officials and those connected with the health boards, for as citizens we must certainly appreciate any conscientious effort exerted in attempting to cope with this condition. My object is merely to bring this matter to your attention from a different point of view, endeavoring, of course, to bring clearly to your minds some principles, which, if applied, can save the world from the errors of another such disaster.

"From my own practice and from reports received from other practitioners, I am able to submit the following information regarding this 'Great Calamity of 1918, the Flu.'

"It began about October 1, 1918, its end being definitely in sight December 25. The compiled statistics on this question are startling. The number of deaths from some cause, is appalling, and deserve an investigation as will be obvious from the following:

"Osteopathic statistics from the United States—three hundred forty-four osteopaths, 10,141 patients, 80 deaths, or one death to every 127 cases."

"Chiropractic statistics from the United States—Eight hundred sixty-five chiropractors, 25,141 influenza cases, 41 deaths, or one death to every 836 cases."

"Medical statistics as far as I find them available, show approximately one death to every 18 'flu' cases."

Babe Ruth Wants Part of Release Money

BOSTON, Mass., Feb. 9.—"Babe" Ruth today announced that he would attempt to obtain \$15,000 of the \$25,000 which the Boston Americans are said to have secured for his release to the New York Yankees. Returning here from the Pacific coast Ruth said he had no intention of making trouble, that he would sign with the Yankees at the salary agreed on, reported to be \$18,000 a year, but that he would endeavor to get a part of his purchase from the Boston club.

Northern France is Being Regenerated

LILLE, Feb. 9.—Perceptible progress toward the regeneration of northern France is shown in reports just made public here. From February 1 to December 1, 1919, 1,250,000,000 francs was advanced to manufacturers and nearly 2,000,000,000 francs will be paid as compensation for war damages. Seed costing 1,200,000 francs and fertilizers worth 22,000,000 were bought for farmers, who in addition received 18,000 head of horses.

When a dancing cap such as this example of the latest mode is worn, a very large, very soft of paradise fan is just the right touch to complete the picture.

The fan in the illustration today is of black and orange and orange feathers. Black jet makes the new cap, which is swathed with soft folds of tulle, with the exception of a short, visor-like projection of jet in front.

Spanish Influenza

Considerable comment has been made lately upon the prevailing epidemic of influenza. Also as to the most effective measures to adopt in combating this disease. In reference to this subject the following article, given by A. F. Blair, D. C., Ph. C., at a public session of the convention recently held in Salt Lake City, I believe offers some practical suggestions on this question, which is deserving of the careful consideration of our community.

H. J. McKAY, D. C., Ph. C.

"Direct and Indirect Observations of Over Thirty-five Thousand Cases. Much comment has been made in many of the leading magazines and newspapers on this subject of 'Influenza,' and particularly in reference to the results of the prophylactic treatment, and other methods adopted in combating this disease.

"What I shall say is not intended to reflect on the best judgment of the individual or our city officials and those connected with the health boards, for as citizens we must certainly appreciate any conscientious effort exerted in attempting to cope with this condition. My object is merely to bring this matter to your attention from a different point of view, endeavoring, of course, to bring clearly to your minds some principles, which, if applied, can save the world from the errors of another such disaster.

"From my own practice and from reports received from other practitioners, I am able to submit the following information regarding this 'Great Calamity of 1918, the Flu.'

"It began about October 1, 1918, its end being definitely in sight December 25. The compiled statistics on this question are startling. The number of deaths from some cause, is appalling, and deserve an investigation as will be obvious from the following:

"Osteopathic statistics from the United States—three hundred forty-four osteopaths, 10,141 patients, 80 deaths, or one death to every 127 cases."

"Chiropractic statistics from the United States—Eight hundred sixty-five chiropractors, 25,141 influenza cases, 41 deaths, or one death to every 836 cases."

"Medical statistics as far as I find them available, show approximately one death to every 18 'flu' cases."

"In Ogden the M. D.'s treated approximately 3555 cases, with 329 deaths."

"Chiropractors in Ogden had under their care 1114 cases with two deaths."

"In Salt Lake City there were 10,268 cases under medical care with 576 deaths."

"Chiropractors in the same city had 912 cases, with one death."

"In view of the above information one is forced to inquire into the reason for all this difference. To begin with, let me say that never before has the public had so little confidence in the medical profession. On the other hand never before has the public so intensely observed chiropractic, the newer and more natural method of healing. If the medical doctors' ever expect to again hold the confidence of the people, they must change their tactics completely.

"Do not infer that I think the medical fraternity are all culprits or fools, but if they treated themselves and their families so they died, how can their methods be trusted?

"We all knew this epidemic would surely reach us when it was raging in Europe. Did the medical fraternity benefit from their experience? According to some of the advance sheet information sent out by the medical boards of some foreign countries, they advised giving certain costar products and plenty of nourishing food. Some of these costar products were of Hun origin, and made by large Hun corporations, and to this treatment can be laid the blame for the death of thousands of citizens, but soon this country sent out similar advice through the public press and health boards. Then because the patients died so fast frantic calls for serum and vaccines were sent out, and doctors began to use any thing in the serum or vaccine line. Still the victims died and kept on dying. Not a single medical doctor in the land set out to find some natural method for conquering this great scourge, but like the ostrich their heads were set, and there they lived rather than lift their heads to be liberated.

"That the Spanish influenza was pandemic there is no doubt, for all the world has been smitten by it. What it is, its cause, and specific, or even dependable remedy, there are wide divergences of belief and opinions among the medical fraternity. As to chiropractors, we are generally agreed. That the cause of the disease is unknown, and that the medical treatment is an experiment and a failure I need only to refer you to their reports.

"Dr. Rosenow, chairman of a special investigating board, in his report, appearing in the Journal of The American Medical Association, issue of October 29, 1918, says: 'The evidence at hand affords no trustworthy basis for regarding prophylactic vaccination against influenza as of value in preventing the spread of the disease, or of reducing its severity. Further experimental evidence should be collected.'

"Announcement is made of a ruling issued by the health department of the United States government to the effect that the serum, which has been so widely advertised as a preventive for Spanish influenza and administered by many physicians throughout the country, is utterly devoid of any virtue in producing the results claimed for it. It is looked upon as a most deplorable condition, that thousands of people have been induced to take the serum
